

SCHOOL MANAGEMENT SYSTEM

A School Management System is designed to Remember those entities, which are unable to remember in daily uses like it is very difficult to get information about that student who left the school 3 yr ago, and its more difficult if you have to find data of 9-10 students who has left your school in different years, you have to go through from several years data (admission registers, record books) to found record of those 9-10 students, which become very time consuming and **not easy**. But through SMS(School Management System) it become very easy to find any record because every student has a unique id, you just have to enter that id all information regarding that particular student will be shown on screen you can even print those information on paper. In this Maintaining record becomes very much easier than any other method(like to search on record books).

In this you can also manage the record of teacher's. All regarding teacher's is present in this software. You can add full information about every teacher. Even you can modify the data or you can easily make salary of each teacher. Yes Teacher Panel also work on unique id of every teacher. Each teacher has its own id(teacher_ID). If you want to alter any information regarding any teacher you have to put a id no. of that particular teacher then information will be open in front of you and then you just have to make changes and save it. You can set, basis salary, information regarding previous experience, set bonus, give increment and much more.
